

ABOUT THE PROGRAM

The objects of professional activity will be industrial, civil buildings, engineering, hydraulic and environmental structures, water supply and sanitation networks. You will be able to build and install water supply and sanitation systems for buildings and structures, operate natural water treatment plants, as well as domestic and industrial wastewater treatment plants, you will be able to operate water supply and sanitation networks, treatment and water treatment plants and structures.

Disciplines studied within the profile:

Hydraulics of water supply and sanitation structures,

Water purification and treatment.

Pumping and air blower stations.

Economics.

Building structures,

technology of construction of water supply and sanitation facilities.

Hydrology,

hydrometry and hydraulic structures.

Operation of water supply and sanitation systems.

Automation of water supply and sanitation systems.
